Data Mining GeeksforGeeks

In general terms, Mining is the process of extraction of some valuable material from the earth e.g. coal mining, diamond mining etc. In the context of computer science, Data Mining refers to the extraction of useful information from a bulk of data or data warehouses. One can see that the term itself is a little bit confusing. In case of coal or diamond mining, the result of

Data Mining is a set of method that applies to large and complex databases. This is to eliminate the randomness and discover the hidden pattern. As these data mining methods are almost always computationally intensive. We use data mining tools, methodologies, and theories for revealing patterns in data. There are too many driving forces present.
